

AI Use Declaration Form

Course: Introduction to Artificial Intelligence

Lab Title: Lab 1 Part A — Uninformed Search Algorithms

Student Name: _____ Mariem Sall _____

Student ID: _____ 3043027 _____

GitHub Repository Link: __ https://github.com/Mariem-mcs/Sall_Mariem_Lab0/tree/main

Date Submitted: __ 05/06/2026 _____

1. AI Use Summary

Question	Student Response
Did you use any AI tool for this lab?	Yes
Estimated percentage of the work influenced by AI	% 7
Did you attach evidence of AI use where applicable?	Yes

2. Details of AI Use

Complete the table below for each AI tool used. Add more rows where necessary.

Name of AI Tool Used	Purpose for Using the Tool	Prompt or Instruction Given to the Tool	Part(s) of the Work Influenced by the Tool	How I Verified, Edited, or Improved the AI Output
Deepseek	Exercise 7: Integration Challenge	Please can you help understand this assignment, and guide me	# TODO: Calculate customer lifetime value (CLV) # CLV = purchase_frequency * avg_purchase_value * (1 + churn_risk) # where churn_risk = 1 - (purchase_frequency / max_frequency)	Before using the AI, I was getting errors when running the code I had, but after the use of AI code the output was what is asked.

3. Attachment of AI Output Evidence

Where required, attach evidence of AI use. Tick all that apply. Add more rows where necessary.

Evidence Type	Attached? (Yes, No, N/A)	File Name
AI-generated draft	Exercise 7: Integration Challenge Combine NumPy, Pandas, and Matplotlib to solve a mini data science problem. <pre> """ import numpy as np import pandas as pd import matplotlib.pyplot as plt import seaborn as sns np.random.seed(42) n_customers = 500 # Generate customer data ages = np.random.randint(18, 70, n_customers) income = np.random.normal(50000, 20000, n_customers).clip(15000, 150000) purchase_freq = np.random.poisson(5, n_customers) avg_purchase_value = np.random.normal(100, 30, n_customers).clip(10, 500) # Create DataFrame customers = pd.DataFrame({ 'age': ages, 'income': income, 'purchase_frequency': purchase_freq, 'avg_purchase_value': avg_purchase_value }) # ===== # CLV Calculation # ===== max_freq = customers['purchase_frequency'].max() customers['churn_risk'] = 1 - (customers['purchase frequency'] / </pre>	

	max_freq) customers['CLV'] = (customers['purchase_frequency'] * customers['avg_purchase_value'] * (1 + customers['churn_risk']))	
Prompt history		
Screenshot of AI interaction		
Exported AI conversation		
AI-generated code snippet		
Revised version showing student input		

4. Student Declaration

I declare that:

Declaration Statement	Response (Yes/No)
The submitted work is my own work.	Yes
Any use of AI tools has been clearly declared in this form.	Yes
The prompts, instructions, and AI-generated outputs have been disclosed where applicable.	Yes
I reviewed, tested, edited, and improved any AI-generated content before submission.	Yes
My AI usage does not exceed 25% of the entire work.	Yes
I understand that undeclared or excessive AI use may be treated as academic misconduct.	Yes
